

1. Project Title: Airline Reservation System

This project is centered on building a relational database system designed to support the operations of a commercial airline company. The system consists of multiple interconnected tables that organize information related to airlines, flights, aircraft, airports, passengers, reservations, payments, baggage tracking, gates, routes, employees, and maintenance activities. It contains detailed records of flight schedules, aircraft assignments, airport connections, and ticket purchases while linking passengers to their reservations. The database also manages aircraft maintenance logs, gate availability, baggage status updates, and employee roles to ensure smooth and safe flight operations. Also, revenue tracking and route management are integrated into the system to support analytical reporting. This database is in third normal form, ensuring accuracy and eliminating redundancy. This database provides a reliable foundation for decision making and efficiency, as well as overall airline performance.

2. ER Diagram:

3. Drop Create Tables

Create tables and insert data for each table. Each table should have at least ten records.

--Drop Tables

```
Drop table Baggage;  
Drop table Payment;  
Drop table Reservation;  
Drop table Passenger;  
Drop table Flight;  
Drop table Airline;  
Drop table Aircraft;  
Drop table Airport;  
Drop table Gate;  
Drop table Employee;  
Drop table MaintenanceRecord;  
Drop table FlightRoute;
```

--Create Tables

```
Create Table Passenger  
(PassID int not null,  
FName varchar(20) not null,  
LName varchar(20) not null,  
DOB date not null,  
PassportNum varchar(20) not null,  
Nationality varchar(20) not null,  
Tel varchar(15),  
Primary Key (PassID));
```

```
insert into passenger values(109, 'eric', 'thieret', to_date('01/31/2002','mm/dd/yyyy'),  
'p12783984', 'american', '330-456-9087');  
insert into passenger values(110, 'liza', 'galchenko', to_date('03/18/2004','mm/dd/yyyy'),  
'a98367478', 'russian', '457-908-3875');  
insert into passenger values(111, 'mary', 'evans', to_date('03/30/2004','mm/dd/yyyy'),  
'a92671190', 'american', '376-927-1264');  
insert into passenger values(112, 'ella', 'boyd', to_date('09/13/2003','mm/dd/yyyy'),
